Homework for Experiment 2. Section: 9

Problem 2.1

Table 2.6: Demand Table for Sessions 1 and 2

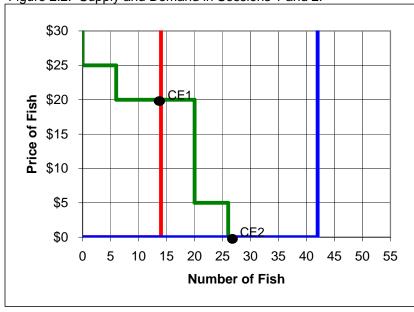

Price Range	Amount Demanded
P>\$25	0
\$20 <p<\$25< td=""><td>6</td></p<\$25<>	6
\$5 <p<\$20< td=""><td>20</td></p<\$20<>	20
P<\$5	26

Problem 2.2

Part a)	How many fish will be supplied a	t a price of \$15?	14
Part b)	How many fish will be supplied a	t a price of \$5?	14
Part c)	How many fish will be supplied a	t a price of \$1	14
Part d)	d) What can you conclude about the supply curve for fish at positive prices?		
	At all positive prices,	14 fish will be supplied.	

Problem 2.3

Figure 2.2: Supply and Demand in Sessions 1 and 2.

Problem 2.4

Table 2.7: Predictions and Outcomes in Session 1

	Experimental Outcome	Competitive Prediction
Mean Price	\$15.93	\$20.00
Number of Fish Sold	14	14
Total Fishermens' Profit	\$83.00	\$140.00
Total Demanders' Profit	\$77.00	\$30.00
Total Profits All Participants	\$160.00	\$170.00

Problem 2.5

Table 2.8: Predictions and Outcomes in Session 2

Mean Price Number of Fish Sold Total Fishermens' Profit Total Demanders' Profit Total Profits All Participants	Experimental Outcome \$2.54 25 -\$76.39 \$391.39 \$315.00	Competitive Prediction \$0.00 26 -\$140.00 \$460.00 \$320.00	
Problem 2.6 a) The number of fish caught in b) The mean price of fish (rose c) Total profits of fishermen (rosed) Total consumer surplus (<u>rosed</u>)	?f <u>ell</u> ?) from se? <u>fell</u> ?) from	14 to \$15.93 to \$83.00 to \$77.00 to	42 . \$2.54 . -\$76.39 . \$391.39 .
Problem 2.7 a) The mean price of fish (rises b) Total profits of fishermen (ris c) Total consumers' surplus (<u>ris</u>	es? <u>falls</u> ?) from	\$20.00 to \$140.00 to \$30.00 to	\$0.00 . -\$140.00 . \$460.00 .

Problem 2.8

a) if he expects the price of fish to be \$3?b) if he expects the price of fish to be \$7?
